

## Vector Spaces and Subspaces

### (Institution D)

#### PART I: Vector Spaces

**Definition:** A **vector space** is a nonempty set  $V$  of objects, called *vectors*, on which are defined two operations, called *addition* and *multiplication by scalars* (real numbers), subject to the ten axioms (or rules) listed below. The axioms must hold for all vectors  $\mathbf{u}$ ,  $\mathbf{v}$ , and  $\mathbf{w}$  in  $V$  and for all scalars  $r$  and  $s$ .

- (1) For any  $\mathbf{v}, \mathbf{w} \in V$ , their **vector sum** is an element of  $V$ .
- (2) If  $\mathbf{v}, \mathbf{w} \in V$ ,  $\mathbf{u} + \mathbf{v} = \mathbf{v} + \mathbf{u}$
- (3) For any  $\mathbf{u}, \mathbf{v}, \mathbf{w} \in V$ ,  $\mathbf{u} + (\mathbf{v} + \mathbf{w}) = (\mathbf{u} + \mathbf{v}) + \mathbf{w}$
- (4) There is a **zero vector**,  $\mathbf{0} \in V$ , such that for all  $\mathbf{u} \in V$  we have  $\mathbf{u} + \mathbf{0} = \mathbf{0} + \mathbf{u} = \mathbf{u}$ .
- (5) Each has an **additive inverse**  $\mathbf{w} \in V$  such that  $\mathbf{w} + \mathbf{v} = \mathbf{0}$ .
- (6) If  $r$  is a scalar, that is a member of  $\mathbb{R}$  and  $\mathbf{v} \in V$  then the **scalar multiple** is in  $V$ .
- (7) If  $\mathbf{v}, \mathbf{w} \in V$  then  $(r + s) \cdot \mathbf{v} = r \cdot \mathbf{v} + s \cdot \mathbf{v}$
- (8) If  $\mathbf{v}, \mathbf{w} \in V$  then  $r \cdot (\mathbf{v} + \mathbf{w}) = r \cdot \mathbf{v} + r \cdot \mathbf{w}$
- (9) If  $\mathbf{v}, \mathbf{w} \in V$ ,  $(rs) \cdot \mathbf{v} = r \cdot (s \cdot \mathbf{v})$
- (10) For any  $\mathbf{v} \in V$ ,  $1 \cdot \mathbf{v} = \mathbf{v}$

Using this definition determine whether the following examples represent a vector space. In each case, circle your response and provide justification when necessary.

1. The set  $\mathbb{R}^2$ , where the operations “+” and “ $\cdot$ ” have their usual meaning:

$$\begin{pmatrix} x_1 \\ x_2 \end{pmatrix} + \begin{pmatrix} y_1 \\ y_2 \end{pmatrix} = \begin{pmatrix} x_1 + y_1 \\ x_2 + y_2 \end{pmatrix} \text{ and } r \cdot \begin{pmatrix} x_1 \\ x_2 \end{pmatrix} = \begin{pmatrix} rx_1 \\ rx_2 \end{pmatrix}.$$

Answer: YES      NO      Justify your answer.

2. The subset of  $\mathbb{R}^3$  that is a plane through the origin  $P = \left\{ \begin{pmatrix} x \\ y \\ z \end{pmatrix} \mid x + y + z = 0 \right\}$  and operations “+” and “ $\cdot$ ” have their usual meaning.

Answer: YES      NO      If your answer is NO, please list the axioms that fail.

3.  $\{0\}$  – The set of zero vector

Answer: YES      NO      Justify your answer.

4.  $F(\mathbb{R})$ : the set of all functions  $f: \mathbb{R} \rightarrow \mathbb{R}$ .

Answer: YES      NO      Justify your answer.

5.  $C(\mathbb{R})$ : the set of all continuous functions  $f: \mathbb{R} \rightarrow \mathbb{R}$ .

Answer: YES      NO      Justify your answer.

6.  $\mathcal{P}$ : all polynomials  $p(x) = a_0 + a_1x + a_2x^2 + \dots + a_nx^n$

Answer: YES NO Justify your answer.

7. The subset of  $\mathbb{R}^3$  that is a plane parallel to the  $xy$ -plane,  $P = \left\{ \begin{pmatrix} x \\ y \\ z \end{pmatrix} \mid z = 5 \right\}$  where operations “+” and “.” have their usual meaning as described in previous example.

Answer: YES NO If your answer is NO, please list at least one axiom that fails.

8. A set of all vectors in the first quadrant:

Answer: YES NO If your answer is NO, please list at least one axiom that fails.

## PART II: Subspaces

A *subspace* of a vector space is defined in the following way:

**Definition:** A subspace of a vector space  $V$  is a subset  $H$  of  $V$  that has three properties:

- The zero vector of  $V$  is in  $H$
- $H$  is closed under vector addition. That is, for each  $u$  and  $v$  in  $H$ , the sum  $u+v$  is in  $H$ .
- $H$  is closed under multiplication by scalar. That is, for each  $u$  in  $H$  and each scalar  $c$ , the vector  $cu$  is in  $H$ .

1. Is the line given in the picture a subspace of  $\mathbb{R}^2$ ?

(a)

Answer: YES NO Justify your answer.

(b)

Answer: YES NO Justify your answer.

2. Go back and examine all of the examples given in PART I (for vector spaces). Can you identify any two sets that represent a vector space and its subspace?

Answer:

3. Give at least two more examples of a vector space and its subspace. If you wish, you may use the examples given in PART I.
